

The Science Department

The Science Department at Chase High is at a pivotal time in its development and this is an opportunity for the right candidate to make a significant contribution to further improvement.

The department is very well resourced with 7 fully equipped laboratories, two prep rooms and a team of highly experienced technicians. There are interactive whiteboards in all rooms and practical work is encouraged.

The students study a bespoke KS3 programme based on the Collins scheme and AQA courses are followed for GCSE. Both separate sciences and the trilogy course are taught to students. We also offer BTEC Applied Science level 3.

The department undertakes many extra-curricular activities including science club, robotics club, the Faraday Challenge (winners of the Innovation Award in 2018) and the popular Bushcraft Camp.

If you want to work with a friendly and supportive team of experienced scientists to deliver high quality science lessons to students across the ability range, then we would like to meet you.
