

## The Science Department

The Science Department at Chase High is at a pivotal time in its development and this is an opportunity for the right candidate to make a significant contribution to further improvement.

The department is very well resourced with 6 fully equipped laboratories, two prep rooms and a team of highly experienced technicians. A seventh lab will be built this summer to accommodate rising school numbers. There are interactive whiteboards in all rooms and practical work is encouraged.

The students study a bespoke KS3 programme based on the Collins scheme and AQA courses are followed for GCSE. Both separate sciences and the trilogy course are taught to students. A levels are currently offered in Biology and Chemistry and in 2018 one of our students gained place a medical school.

The department undertakes many extra-curricular activities including science club, robotics club, the Faraday Challenge (winners of the Innovation Award in 2018) and the popular Bushcraft Camp.

If you want to work with a friendly and supportive team of experienced scientists to deliver high quality science lessons to students across the ability range, then we would like to meet you.
